

Chlori-Flush Water Line Disinfection System

Uses:

- New potable water distribution lines
- Decontaminate existing potable water distribution lines that have been compromised due to repairs or during routine maintenance.

Features:

- Used to chlorinate or de-chlorinate
- Lightweight and portable
- Simple operation, no pump required
- Easy to maintain
- Uses calcium hypochlorite granules or liquid bleach
- Amount of chemical needed is determined by pipe size, which results in reduced waste.
- Replacement parts available
- Made in USA

The Process:

- The blow-off or fire hydrant is opened on the end to be chlorinated
- Place chlorine in Chlori-Flush according to chart on the side of unit
- Main water line is opened and water is allowed to flow through the Chlori-Flush
- Chemicals are adjusted and regulated

Typical Connections:
